

Installation of Document Output on a Docker environment

Installation of Document Output on a Docker environment.

To download Document Output, follow these steps:

1. Go to the Continia PartnerZone.
2. In the menu at the top, select Downloads.
3. Use the filters to locate the latest version of Document Output, and select Download to download the product package.
4. Extract the product package to a folder on your computer.

In the app folder, select the folder that matches your Business Central version (your platform), including the correct cumulative update.

Name	Status	Date modified	Type
App	✓	11-05-2021 08:14	File folder
Documentation	✓	11-05-2021 08:14	File folder
Software	✓	11-05-2021 08:14	File folder
Support Files	✓	11-05-2021 08:15	File folder

Note: You can't use the *Install.ps1 powershell script for Docker*.

When installing Document Output on a Docker environment there are some dependencies.

- 1) Install Core
- 2) Install Delivery Network
- 3) Install Document Output

All Apps are in the Document Output product package you have downloaded.

Name	Status	Date modified	Type
Continia Document Output	✓	11-05-2021 08:14	File folder
Core	✓	11-05-2021 08:14	File folder
Delivery Network	✓	11-05-2021 08:14	File folder
