To view and edit the documents in Continia Document Capture, both the client and the server components are required. Depending on the NAV/Business Central version, different requirements for NAV/Business Central clients apply.
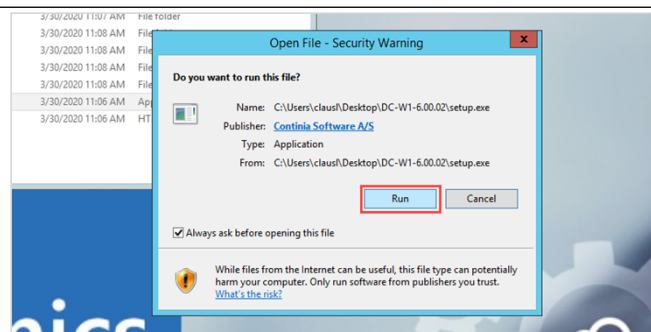

In environments with NAV 2016 or earlier, and Business Central 2019 Wave 2 or newer, you must install both the server, client, and scanner components manually. For NAV 2017, 2018, and 2019 Spring, all required components are automatically installed when running the Document Capture Setup Wizard, and therefore nothing needs to be manually installed. This, however, requires the possibility to establish an outgoing connection through port 80 and 443 to Continia Online. If you, as an implementer, wish to compile the Document Capture NAV objects, you must always manually install the components first. Please notice, that from Business Central 2019 Wave 2 only the scanner and server components are required.

This guide shows you how to install the Document Capture components manually. Start the installation by opening the installation package downloaded from the Continia PartnerZone.
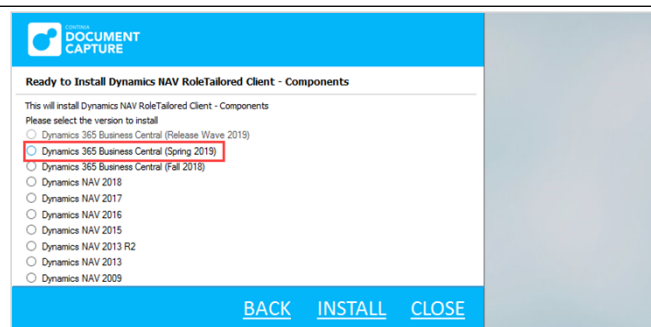

Run the "**setup**" file.

When presented with the Security Warning, select "**Run**".
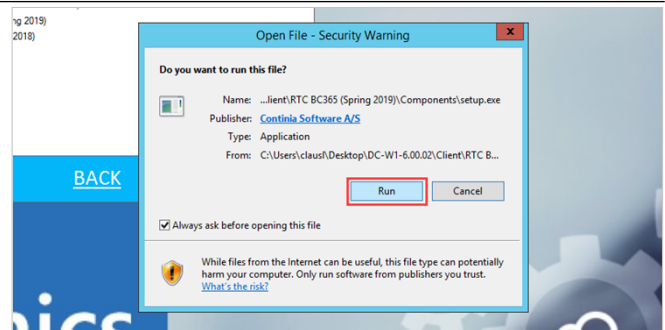

Select "**Client Components**" in the menu.

When presented with the list of NAV and Business Central versions, please choose the one matching your environment.
In this scenario, we select "**Dynamics 365 Business Central (Spring 2019)**".

Select "**INSTALL**" to install the Client Components.

When presented with the Security Warning, select "**Run**".

The scanner component is only necessary to install when you have a scanner directly connected to your local computer. If you use a network scanner, like an MFP, you can skip this component. Please notice, the scanner component is only for local PC installation - not for Microsoft Terminal Server, Citrix or similar remote access servers.
Select "**Scanner Components**" in the menu.

When presented with the list of NAV and Business Central versions, please choose the one matching your environment.
In this scenario, we select "**Dynamics 365 Business Central (Spring 2019)**".

Select "**INSTALL**" to install the Scanner Component.

If you run a 64-bit operating system, this warning is shown. Please follow the instructions after completing the installation of the scanner component.
Select "**INSTALL**".

When presented with the Security Warning, select "**Run**".
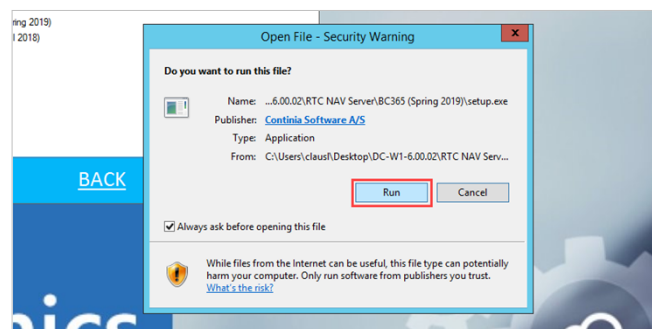

Select "**Server Components**" in the menu.

When presented with the list of NAV and Business Central versions, please choose the one matching your environment.
In this scenario, we select "**Dynamics 365 Business Central (Spring 2019)**".

Select "**INSTALL**" to install the Server Component.

When presented with the Security Warning, select "**Run**".

The installation of the Document Capture components is completed.
Select "**CLOSE**" to close the installation program.
